

AMENDMENTS TO THE CLAIMS:

Please cancel Claims 1, 8 and 10 without prejudice or disclaimer of subject matter.

Please amend claims 2-7 and 9 as follows. For the Examiner's convenience, the claims currently pending in this application have been reproduced below:

1. (Canceled)

2. (Currently Amended) ~~A cover~~ An image display apparatus according to Claim [[1]] 7, wherein the anode-terminal cover is sucker-shaped, and the insulating body and the conductive ~~contact~~ portion are commonly made of an elastic material.

3. (Currently Amended) ~~A cover~~ An image display apparatus according to Claim [[1]] 7, wherein the insulating body and the conductive ~~contact~~ portion are integrally formed by two-color injection molding.

4. (Currently Amended) ~~A cover~~ An image display apparatus according to Claim [[1]] 7, wherein the anode-terminal cover is sucker-shaped, and the insulating body is made of an elastic material while the conductive ~~contact~~ portion is formed of a flexible conductive film.

5. (Currently Amended) ~~A cover~~ An image display apparatus according to Claim  
[[1]] 7, wherein the conductive ~~contact~~ portion is a film of conductive paste.

6. (Currently Amended) ~~A cover~~ An image display apparatus according to Claim  
[[1]] 7, wherein the conductive ~~contact~~ portion is annularly formed along the entire periphery of  
the internal surface of the anode-terminal cover.

7. (Currently Amended) ~~A~~ An image display apparatus comprising:  
a display comprising:  
an electron emission unit;  
an anode electrode, to which an electric potential for accelerating an electron  
emitted by the electron emission unit is applied;  
an anode-electrode terminal for feeding the electric potential to the display  
apparatus; and  
a first electrode sitting on a periphery of the anode-electrode terminal; and  
an anode-terminal cover contacting to the display and covering the anode-  
electrode terminal, wherein  
said anode-terminal cover comprises:  
an insulating body; and

a conductive portion which is annularly positioned on the insulating body and contacts the first electrode, and

a predetermined potential is applied to the first electrode and the conductive portion according to ~~Claim 1 for covering the anode-electrode terminal.~~

8. (Canceled)

9. (Currently Amended) ~~★~~ An image display apparatus according to Claim ~~[[8]]~~ 7, wherein the ~~conductive contact portion is defined to have the~~ predetermined potential is a ground potential.

10. (Canceled)
